

Broome High School COVID-19 Flow Sheet of Possible Scenarios

The following are possible events that may arise at BHS. The purpose of this document is to demonstrate and outline procedures that will be taken by the BHS administrative and sports medicine staff.

*****Information and procedures are subject to change*****

1) IF a participating individual (such as an student athlete or coach) has a confirmed positive case of COVID-19

THEN the entire group in which this specific individual was affiliated with must quarantine and self-monitor symptoms and temperature twice-a-day for the next 14 days starting with the date of disease confirmation

ALSO the facility must be fully cleaned as best as possible (exceptions include areas that cannot be cleaned such as a cross country course, open field, etc.)

2) IF a participating individual is within “close-contact”* with a confirmed COVID-19 patient

THEN the individual must quarantine and self-monitor symptoms and temperature twice-a-day for the next 14 days starting with the date of disease confirmation

3) IF a student athlete has a diagnosed with a chronic illness (including but not limited to hypertension, lung disease, asthma, diabetes, and immunosuppressed)

THEN the student athlete must obtain medical clearance for participation from a physician and submit a clearance note to the sports medicine staff. This must be performed prior to start of participation. An indication of clearance on a sports physical will suffice as long as the illness is addressed

The following scenarios are relevant to the prescreening process. Answers to the health screening questions and temperature recordings are valid for the remainder of the day. All individuals must be screened every day prior to participation.

4) IF an individual has a temperature equal to or greater than 100.4 degrees Fahrenheit

THEN the individual will be allowed to sit in a cool indoor environment for no more than 10 minutes and will be retested.

IF the individual who has been retested still has a temperature equal to or greater than 100.4 degrees Fahrenheit, they will be allowed to be retested once more by a medical professional and receive an oral temperature check

IF the individual who has been retested three times (the third test administered orally) and the third test is equal to or greater than 100.4 degrees Fahrenheit they will be deemed to have a fever

5) IF an individual has responded “Yes” to any of the questions asked in the prescreening questionnaire (provided by the CDC and DHEC) AND/ OR the individual has been deemed to have a fever (see scenario 4 for procedure)

THEN the individual will not be allowed to participate and will be asked to leave the school campus

THEN the individual will have the following three options:

a) self-quarantine for 14 days and symptoms has resolved

b) be cleared by a physician to return to participation and thus submit this clearance note to the sports medicine staff prior to participation

c) receive a confirmed negative COVID-19 test and submit test results to sports medicine staff prior to participation

ALSO no individual may be allowed on campus/ allowed to participate in athletics if they are symptomatic regardless of physician clearance or test results

* “Close-Contact” is defined by the CDC and used by DHEC as an individual who has been in within 6 feet of the confirmed COVID-19 patient for equal to or greater than 15 minutes.

Examples of this scenario include but are not limited to living with the confirmed patient, sharing a car ride for longer than 15 minutes with the confirmed patient, and standing/ sitting next to the confirmed patient within these parameters
